DETAILED ACTION

This office action is in response to the amendment filed 7/28/03.

Claim Objections

Claims 29-45 are objected to because of the following informalities:

Throughout the claims, there is "a ring layer" on the MEMS substrate and "a ring layer" on the integrated circuit. To avoid confusion, these ring layers should be "a first ring layer" and "a second ring layer".

Throughout the claims, there is "a pad" on the MEMS substrate and "a pad" on the integrated circuit. To avoid confusion, these pads should be "a first pad" and "a second pad".

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 29, 31-36, 38-43 and 45 are rejected under 35 U.S.C. 102(a) and/or 35 U.S.C. 102(e) as being anticipated by Bishop et al (EP 1093162 A1, cited by examiner in Paper No. 5).

Bishop et al teach a method comprising

Forming a MEMS device 25, a first ring layer 30 and a first pad 120 on a substrate 40 such that the MEMS device 25 and the pad 120 are within the ring layer 30 (Fig. 3);

Forming an integrated circuit 70;

Forming a second ring layer 30 and a second pad 120 on the integrated circuit 70 such that the second pad is within the second ring layer (Figs. 4A-4C); and

Bonding the first ring layer to the second ring layer and bonding the first pad to the second pad to form a sealed cavity 20 that includes the MEMS device 25, the first pad and the second pad,

Wherein the first pad 120 and the second pad 120 are not mechanically engaging the MEMS device 25,

Wherein the pads 120 electrically connect the substrate and the integrated circuit (col. 6, lines 1-12), and

Wherein the bonding steps are performed in a controlled environment comprising a vacuum atmosphere (col. 1, lines 37-40 and col. 7, lines 31-35).

See, for example, Figs. 1, 3 and 4A-4C and accompanying text.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

Art Unit: 2822
